SUMMARY

Results-driven Flutter Developer and Team Lead with 3+ years of experience architecting and shipping cross-platform mobile applications for Android and iOS. Proven track record of taking products from Figma handoff through to production release, with deep expertise in Provider/setState state management, scalable design systems, RESTful API integration, and real-time, interactive UI features. Adaptive to the use of AI coding agents to increase development velocity and streamline delivery.

EDUCATION

Bachelor of Software Engineering Dec 2020 – Feb 2024
COMSATS University, Islamabad

SKILLS

- | | | |
|----------------------|------------------------|------------------------|
| • Flutter & Dart | • State Management | • Design Systems |
| • REST APIs | • Localisation (RTL) | • Git & GitHub |
| • Figma to Flutter | • Team Leadership | • Cross-Platform Apps |
| • Agile / Scrum | • UI/UX Implementation | • App Store Deployment |
| • Push Notifications | • SDLC | • AI Coding Agents |

WORK EXPERIENCE

Flutter Developer / Team Lead Feb 2024 – Present
Splendify (Remote)
Promoted to Team Lead, February 2026

- Built and shipped cross-platform mobile apps in Flutter across multiple production releases, covering the full cycle from Figma design handoff to production deployment on Android and iOS.
- Architected scalable app structures using **Provider and setState** state management alongside custom design token systems (**AppTheme/AppText**), reducing UI rework and enforcing clean separation of concerns.
- Built **reusable widget systems and custom component libraries** to enforce UI consistency and accelerate development velocity across multiple client products.
- Delivered localisation using Flutter's ARB-based framework, turning a poorly defined problem into a repeatable process.
- Consumed RESTful APIs to connect mobile frontends with backend services, handling authentication flows, JSON parsing, and error state management.
- Managed Android/iOS platform compliance, including manifest and permission handling for Play Store requirements and resolving iOS distribution/App Store archive issues.
- Led sprint planning, task assignment, and delivery coordination for a team in a remote-first environment.
- Leveraged **AI coding agents** (Claude Code, Figma MCP-driven workflows) to accelerate feature development, automate repetitive implementation work, and speed up design-to-code handoff across the team.

Flutter Developer May 2026 – Present
Prompt Sphere (Remote)

- Developed **Dime Dropper**, a cross-platform Flutter sports application, from the ground up as an early-stage mobile app development engagement.
- Built the end-to-end **authentication and onboarding flow**, including sign-up, login, and user session management using **RESTful API integration**.
- Implemented **tournament and fan-engagement features**, including tournament brackets, fan home module, and real-time content feeds.
- Established the **core design system, reusable UI component library, and app architecture** that later served as the foundation for subsequent product development.
- Applied **Provider state management** and clean code practices to ensure scalable, maintainable **Android and iOS** builds.
- Collaborated in an **Agile / Scrum** environment with designers and backend engineers to translate **Figma** designs into pixel-accurate, production-ready UI.

PROJECTS

FanHub

Developed and maintained a cross-platform Flutter sports fan-engagement application supporting live games, fan communities, team discovery, and interactive experiences. Owned the implementation of complex modules including a **real-time basketball scoring system** with court visualization, landscape layouts, multi-step stat tracking, and quarter-by-quarter game management. Built the threaded **Game Thread**, Donation Hub, tournament and leaderboard experiences, ticket purchasing flow, FanWall, Predictions/Voting, team detail screens, and campaign creation workflows. Implemented live streaming experiences including **Go Live** and EngageLive interactions. Structured navigation using **GoRouter**, managed screen-level state with **Provider/ChangeNotifier**, and established reusable **AppTheme/AppText** design tokens and shared components across 15+ screens. Also handled production release requirements, including permission compliance and iOS archive/distribution issues for App Store releases.

Community At

Developed and maintained a Flutter-based community platform combining local marketplace listings, events, direct messaging, and bookable expert sessions. Owned the implementation of core user-facing experiences including **community details, marketplace discovery and listing flows, event discovery, real-time chat, expert booking, and profile onboarding**. Built reusable contextual action menus and multi-criteria filter bottom sheets to improve content discovery and user navigation. Implemented the application's **ARB-based localization and internationalization system**, resolving translation and RTL rendering issues across multiple screens. Extended the theming and shared UI architecture to maintain visual consistency and support scalable feature development.

MogWars

Developed a Flutter-based ranking and competition app using **Dart**, featuring skill-based leaderboards, real-time ranking updates, player profiles, and referral functionality. Built **MogOff**, an in-app live streaming feature that enables top-ranked players to broadcast content to followers. Designed and implemented the complete onboarding flow and a reusable UI component system from the ground up, maintaining a consistent and scalable application architecture.

AutoAid

Developed a Flutter-based on-demand mechanic booking application using **Dart**, enabling users to request roadside assistance and vehicle repair services in real time. Integrated an **AI-powered chat assistant** to analyze reported vehicle issues and recommend suitable services before booking. Implemented real-time mechanic location tracking, service request management, multi-step booking flows, and job status tracking, with a focus on reusable Flutter widgets, responsive UI, and maintainable application architecture.
